

TWIN PLUS TOUGH ENOUGH FOR MAJOR CITY BANK UPGRADE

An international bank has transformed its data and cabling capacity as part of a programme to expand customer-focused services.

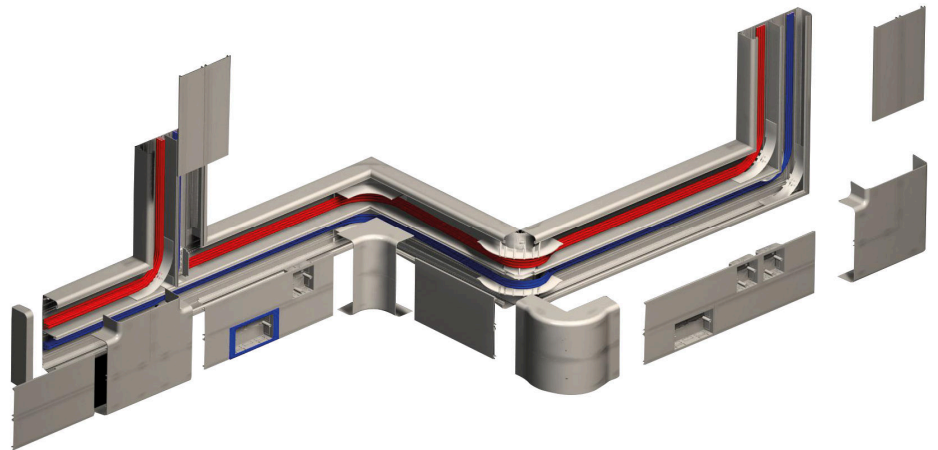

The scale of upgrade at Ziraat Bank's London City branch demanded robust cable management solutions to deliver the electrical infrastructure required. Design-to-install contractors Randburg Electrical Services specified Marshall-Tufflex Twin Plus Aluminium for the job, which spanned new power and lighting, UPS, fire and security on all five levels of the Turkish bank's Cornhill Street headquarters.

At 210mm x 57mm, Twin Plus Aluminium delivers an extra deep cable management solution that features two large permanently segregated high-capacity compartments, each able to be subdivided. This sturdy aluminium trunking is designed to carry large quantities of CAT7a data cabling and was specified for this project for 'its high level of security and durability', reported Randburg, which sourced the product from Edmundson Electrical of Croydon.

Already familiar with Twin Plus, a Randburg spokesman added: "This installation was typical for the product. We chose it because it also looks great."

Used for dado and skirting applications, Twin Plus Aluminium offers bends, angles and tees with large bend radius and is available with a swatch of clip-on polycarbonate fittings with built-in overlaps.
