MARSHALL-TUFFLEX EMPOWERS THE NEXT GENERATION OF ELECTRICIANS

Marshall-Tufflex, has supplied its Sterling Curve Dado trunking to Darke & Taylor's new apprentice training centre – Elevate based in Long Hanborough, Oxfordshire.

Darke & Taylor is a specialist Mechanical and Electrical contractor delivering projects across commercial, education, residential, public sector and retail. Their new facility, just opened in October 2025, is designed as a state-of-the-art workshop to provide practical training for the next generation of electrical and engineering apprentices.

Sterling Curve Dado is one of Marshall-Tufflex's best-selling trunking systems, offering excellent cable capacity, smooth curved aesthetics and a Cat 7a compliancy. It is manufactured using 55% recycled content, helping contractors reduce environmental impact without compromising on quality.

To equip the centre, Marshall-Tufflex supplied Sterling Curve Dado, to support the development of future electricians. The system was chosen for its proven reliability and design benefits, with sustainability considered an added advantage that aligns with Darke & Taylor's own environmental commitments.

Mark Swadling, Contracts Director at Darke & Taylor, said "We chose Marshall-Tufflex not only for the quality of their products, but also for the availability of spares, the ongoing evolution of design, and their wider industry innovation. As a British manufacturer, they set a benchmark for reliability and forward thinking in our sector."

"We are proud to play a part in supporting training and skills development for the next generation of electricians entering the industry", Adrian Murphy, Area Sales Manager at Marshall-Tufflex added.
